## FLEXBOX FROGGY

Level 1 of 24

Welcome to Flexbox Froggy, a game where you help Froggy and friends by writing CSS code! Guide this frog to the lilypad on the right by using the **justify-content** property, which aligns items horizontally and accepts the following values:

- flex-start**: Items align to the left side of the container.
- flex-end**: Items align to the right side of the container.
- center**: Items align at the center of the container.
- space-between**: Items display with equal spacing between them.
- space-around**: Items display with equal spacing around them.

For example, **justify-content: flex-end;** will move the frog to the right.

```
1 #pond {
2   display: flex;
3   justify-content: flex-end
4 }
5
6
7
8
9
10
```

## FLEXBOX FROGGY

Level 2 of 24

Use **justify-content** again to help these frogs get to their lilypads. Remember that this CSS property aligns items horizontally and accepts the following values:

- flex-start**: Items align to the left side of the container.
- flex-end**: Items align to the right side of the container.
- center**: Items align at the center of the container.
- space-between**: Items display with equal spacing between them.
- space-around**: Items display with equal spacing around them.

```
1 #pond {
2   display: flex;
3   justify-content: center
4 }
5
6
7
8
9
10
```

# FLEXBOX FROGGY

Level 3 of 24

Help all three frogs find their lilypads just by using `justify-content`. This time, the lilypads have lots of space all around them.

If you find yourself forgetting the possible values for a property, you can hover over the property name to view them. Try hovering over `justify-content`.

```
1 #pond {
2   display: flex;
3   justify-content: space-around
4 }
5
6
7
8
9
10
```

## FLEXBOX FROGGY

Level 5 of 24

Now use `align-items` to help the frogs get to the bottom of the pond. This CSS property aligns items vertically and accepts the following values:

- `flex-start`: Items align to the top of the container.
- `flex-end`: Items align to the bottom of the container.
- `center`: Items align at the vertical center of the container.
- `baseline`: Items display at the baseline of the container.
- `stretch`: Items are stretched to fit the container.

```
1 #pond {
2   display: flex;
3   align-items: flex-end
4 }
5
6
7
8
9
10
```

# FLEXBOX FROGGY

Level 8 of 24

The frogs need to get in the same order as their lilypads using `flex-direction`. This CSS property defines the direction items are placed in the container, and accepts the following values:

- `row`: Items are placed the same as the text direction.
- `row-reverse`: Items are placed opposite to the text direction.
- `column`: Items are placed top to bottom.
- `column-reverse`: Items are placed bottom to top.

```
1 #pond {
2   display: flex;
3   flex-direction: row-reverse;
4 }
5
6
7
8
9
10
```

# FLEXBOX FROGGY

Level 10 of 24

Help the frogs get to their own lilypads. Although they seem close, it will take both **flex-direction** and **justify-content** to get them there.

Notice that when you set the direction to a reversed row or column, start and end are also reversed.

```
1 #pond {
2   display: flex;
3   flex-direction: row-reverse;
4   justify-content: flex-end;
5 }
6
7
8
9
10
```

# FLEXBOX FROGGY

Level 14 of 24

Sometimes reversing the row or column order of a container is not enough. In these cases, we can apply the **order** property to individual items. By default, items have a value of 0, but we can use this property to set it to a positive or negative integer value.

Use the **order** property to reorder the frogs according to their lilypads.

```
1 #pond {
2   display: flex;
3 }
4
5 .yellow {
6   order: 1
7 }
8
9
10
```

## FLEXBOX FROGGY

Level 18 of 24

Oh no! The frogs are all squeezed onto a single row of lily pads. Spread them out using the **flex-wrap** property, which accepts the following values:

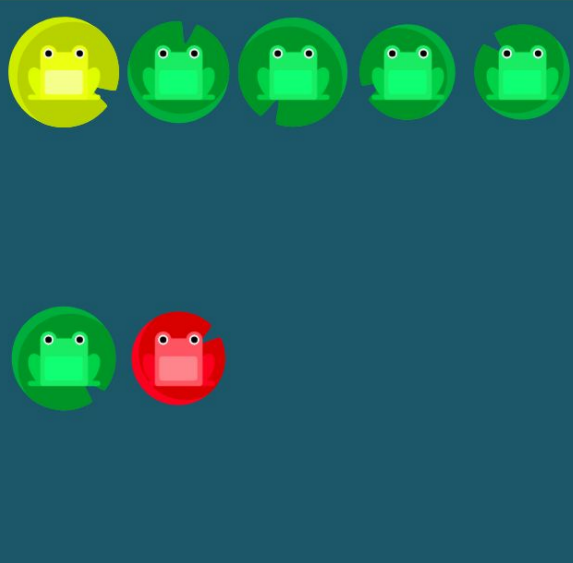

- nowrap**: Every item is fit to a single line.
- wrap**: Items wrap around to additional lines.
- wrap-reverse**: Items wrap around to additional lines in reverse.

```
1 #pond {
2   display: flex;
3   flex-wrap: wrap;
4 }
5
6
7
8
9
10
```

## FLEXBOX FROGGY

Level 20 of 24

The two properties `flex-direction` and `flex-wrap` are used so often together that the shorthand property `flex-flow` was created to combine them. This shorthand property accepts the value of one of the two properties separated by a space.

For example, you can use `flex-flow: row wrap` to set rows and wrap them.

Try using `flex-flow` to repeat the previous level.

```
1 #pond {
2   display: flex;
3   flex-flow: column wrap
4 }
5
6
7
8
9
10
```

## FLEXBOX FROGGY

Level 21 of 24

The frogs are spread all over the pond, but the lily pads are bunched at the top. You can use `align-content` to set how multiple lines are spaced apart from each other. This property takes the following values:

- `flex-start`: Lines are packed at the top of the container.
- `flex-end`: Lines are packed at the bottom of the container.
- `center`: Lines are packed at the vertical center of the container.
- `space-between`: Lines display with equal spacing between them.
- `space-around`: Lines display with equal spacing around them.
- `stretch`: Lines are stretched to fit the container.

This can be confusing, but `align-content` determines the spacing between lines, while `align-items` determines how the items as a whole are aligned within the container. When there is only one line, `align-content` has no effect.

```
1 #pond {
2   display: flex;
3   flex-wrap: wrap;
4   align-content: flex-start
5 }
6
7
8
9
10
```

Next
